PART 1 FLEX APPLICATION BASICS

Chapter 1 Introduction to Flex	3
Understanding web applications	4
Understanding the role of Flex	5
Understanding the role of MXML and ActionScript 3.0	6
Understanding MXML	7
Understanding ActionScript 3.0	8
Understanding the major changes in ActionScript 3.0	9
Working with applications in Flex	11
Working with data in Flex	12
Flex tools for working with data	12
The application development process	13
Useful resources	13
Summary	14
Chapter 2 Working with ActionScript 3.0 in Flex 3	17
Working with ActionScript 3.0 in Flex applications	18
Using inline ActionScript statements	19
Using the <mx:Script> element	22
Using the source attribute in <mx:Script>	27
Using include inside an <mx:Script> element	27
Creating custom class files	28
Understanding packages	28
Understanding custom classes	30
Working through an example	31

Creating ActionScript projects	36
Working with a minimal Flex interface	37
Additional points	40
Understanding ActionScript 3.0 events	40
Creating bindable properties	42
What happened to trace?	42
ActionScript 3.0 best practices	43
Declaring data types appropriately	43
Importing classes	43
Creating appropriate packages	44
Summary	44
Chapter 3 Creating Custom Components	47
Creating components using MXML	48
Example: Creating a country ComboBox component	49
Passing a value to the component	51
Binding a property in the component	54
Dispatching events	55
Creating a custom event class	56
Creating a composite component	59
Creating components using ActionScript	63
Working through examples	63
Passing values to ActionScript components	65
Dispatching custom events in ActionScript components	66
Deciding on MXML or ActionScript	67
Creating simple components	68
Creating composite components	68
Creating nonvisual components	68
Modifying component behavior	68
Creating a new component	68
Using the code-behind approach	68
Sharing components	69
Distributing SWC files	70
Using SWC files	71
Distributing Runtime Shared Libraries	72
Summary	72
Chapter 4 Interacting with Users	75
Working with the Alert control	76
Adding a message and title	76
Adding buttons	77
Setting the parent	77
Adding a closeHandler method	77
Setting the iconClass argument	78
Setting the defaultButtonFlag argument	78
A simple example	78
Changing the appearance of the alert	82
Changing the size of the alert	82

Changing the button labels	83
Changing the button size	83
A simple example	83
Working with pop-ups	84
A simple example	85
Passing values from the pop-up	89
Passing values to the pop-up	92
Responding to pop-up events	93
Working with forms	96
Understanding the Form container	96
Working with a data model	97
Using the <mx:Model> tag	97
Determining required values	101
Validating user input	102
Working with the CreditCardValidator	104
Working with the CurrencyValidator	104
Working with the DateValidator	104
Working with the EmailValidator	105
Working with the NumberValidator	105
Working with the PhoneNumberValidator	106
Working with the RegExpValidator	106
Working with the SocialSecurityValidator	106
Working with the StringValidator	106
Working with the ZipCodeValidator	107
Adding validation to a form	107
Validating with validator events	109
Validating with ActionScript	110
Formatting user input	113
Using the CurrencyFormatter	113
Using the DateFormatter	113
Using the NumberFormatter	114
Using the PhoneFormatter	114
Using the ZipCodeFormatter	115
Applying the formatter	115
Adding formatters to a form	116
Summary	117
Chapter 5 Interacting with the Web Browser	119
Loading a web page from Flex	120
Sending variables when calling a web page	121
Calling JavaScript with navigateToURL	121
Working through a simple example	122
Sending variables into a SWF file	124
Using querystring parameters	125
Modifying the Flex wrapper files	125
Accessing querystring variables in Flex	126
Working through an example	126
Using flashVars	128

Understanding the External API	130
Scripting the ExternalInterface class	130
Calling a JavaScript function using ActionScript	131
Calling an ActionScript function with JavaScript	135
Working through a two-way communication example	139
Limitations of the External API	143
Understanding Flash Player security	144
Summary	145
Chapter 6 Working with Data in Flex Applications	147
Sources of external data	148
Working with the HTTPService class	148
Creating an HTTPService request	149
Making the request	149
Receiving a response	149
Specifying a return type	150
Accessing loaded content	150
Sending variables with the request	151
Specifying a request method and format	151
Properties of the HTTPService class	151
Methods of the HTTPService class	153
Events of the HTTPService class	153
Understanding the URLLoader class	153
Creating a URLLoader request	154
Making the request	154
Receiving a response	154
Specifying a return type	154
Sending variables with the request	155
Specifying a request method	155
Properties of the URLLoader class	155
Methods of the URLLoader class	155
Events of the URLLoader class	156
Comparing the HTTPService and URLLoader	156
Loading information from text files	157
Using the <mx:HTTPService> tag	157
Using the HTTPService class with ActionScript	159
Using the URLLoader class	160
Loading information stored in variable pairs	161
Using variable pairs with the HTTPService class	161
Using variable pairs with the URLLoader class	162
Using the <mx:HTTPService> tag	162
Using the HTTPService class with ActionScript	164
Using the URLLoader class	165
Sending data to the server	166
Sending variables with the HTTPService class	166
Sending variables with the URLLoader	166
Other considerations	167
Working through an example	167
Updating content with the HTTPService class	167

Updating content with the URLLoader class	172
Understanding Flash Player 9 security	174
Understanding security sandboxes	174
Creating a cross-domain policy file	175
Proxying data locally	175
Separating data from presentation	176
Working with the <mx:Model> tag	177
Using ActionScript to work with complex data structures	179
Understanding data binding	187
Binding with curly braces syntax	188
Including a calculation	188
Concatenating values	188
Adding conditions	188
Using an ActionScript function	189
Binding with the <mx:Binding> tag	189
Including a calculation	190
Concatenating values	190
Adding conditions	190
Using an ActionScript function	190
Working through an example	191
Binding with ActionScript	195
Using bindProperty	195
Using bindSetter	197
Working through a scripted binding example	198
Adding validators and formatters	201
Understanding validators	201
Creating a custom validator	201
Understanding formatters	204
Creating a custom formatter	204
Summary	207
Chapter 7 Introduction to XML	209
Understanding XML	210
What is an XML document?	210
Understanding the XML framework	210
A brief history	211
Understanding why you should use XML	212
Simplicity	212
Flexibility	212
Readability	213
Accessibility	213
Platform and vendor independence	213
Using XML information	213
Understanding the structure of an XML document	214
The document prolog	214
The XML declaration	214
Processing instructions	215
Document Type Definitions (DTDs)	216

The document tree	216
The document root	216
Elements	216
Attributes	218
Text	219
Entities	219
CDATA	220
White space	220
Namespaces	220
A simple MXML document	221
Understanding the term “well-formed”	222
Element structure	222
Elements must be closed	223
Elements must nest correctly	223
Use quotes for attributes	224
Summary	224
Chapter 8 Using XML in Flex Builder	227
Working with XML	228
Understanding E4X expressions	228
Understanding the XML and XMLList classes	231
Properties of the XML class	232
Methods of the XML class	233
Manipulating XML content	236
Changing node and attribute values	236
Adding new nodes	237
Copying nodes	237
Deleting nodes	237
Working with the <mx:XML> tag	238
Loading an external XML document	240
Using the <mx:HTTPService> tag	240
Using the HTTPService class with ActionScript	242
Using the URLLoader class	243
Problem solving	244
Binding XML content with E4X expressions	244
Working through an example	245
Consuming web services	253
Working with the WebService class	253
Properties of the WebService class	254
Methods of the WebService class	255
Creating the web service request	255
Specifying the operation	256
Making the request	257
Receiving a response	258
Accessing the web service response	258
Understanding data types	258
Consuming a web service with the <mx:WebService> tag	259
Consuming a web service with ActionScript	263
Summary	265

Chapter 9 Flex Data-Driven Controls	267
Working with a dataProvider	268
Using the Repeater control	269
Setting the dataProvider	269
Using XML as a dataProvider	270
Iterating through controls in a Repeater	271
Working through a simple example	272
Using the TileList	276
Displaying images in a TileList	276
Changing the direction	278
Using a custom item renderer	279
Responding to user interactions	281
Working through an example	281
Using the DataGrid	284
Specifying column settings	285
Sorting columns	287
Reordering columns	287
Setting the display of data within a column	288
Wrapping text within a column	289
Using renderers	289
Working with a drop-in renderer	290
Working with an inline renderer	291
Working with a custom renderer	293
Choosing a renderer	293
Editing content	293
Using the default item editor	294
Using a drop-in item editor	295
Using an inline item editor	296
Using a custom item editor	296
Other column properties	297
Working with rows	297
Using common DataGrid events	298
Working with the change event	298
Working with the itemClick event	299
Working through a DataGrid example	301
Summary	309
Chapter 10 Debugging Flex Applications	311
Working with the trace method	312
Logging to a text file	313
Working with the <mx:TraceTarget> tag	314
Understanding Flex errors	315
Compiler warning messages	315
Compiler errors	316
Run-time errors	317
Using ActionScript to catch run-time errors	318
Working with try catch blocks	318
Including more than one catch block	320

Adding a finally block	321
Throwing custom errors	321
Creating custom errors	322
Using the debugger	323
Adding breakpoints	325
Managing breakpoints	326
Viewing variable values	326
Changing the value of a variable	328
Watching a variable	329
Summary	330

PART 2 DATA-DRIVEN APPLICATIONS

Chapter 11 XML Case Study 333

Understanding the application	334
The application interface	334
The application data source	336
The assets	336
Structuring the application	336
Creating the application structure	337
Creating the interface	337
Creating the custom class	338
Creating the custom component	339
Writing the custom class	339
Declaring private variables	340
Creating the constructor method	340
Loading the XML document	341
Creating the GalleryLoader object	342
Processing the loaded XML content	343
Populating the ComboBox with galleries	345
Building the custom component	346
Creating the interface	346
Configuring the component	347
Displaying the first image	349
Displaying the other images	352
Summary	355

Chapter 12 ColdFusion Project 357

Understanding the application	358
The application data source	360
Structuring the application	361
Creating the application	361
Connecting to the ColdFusion server	361
Creating the ColdFusion page	364
Creating the Flex application	366
Creating the Flex interface	367
Summary	373

Chapter 13 ASP.NET Case Study	375
Understanding the application	376
The application interface	376
The application data source	378
The database structure	378
The XML content	380
Structuring the application	381
Creating the application	383
Creating the Flex application interface	384
Creating the ASP.NET pages to generate XML content for the application	386
Displaying a list of events	387
Displaying a list of categories and locations	389
Creating the custom class	391
Loading the events for a specific date	393
Populating the interface with the events	395
Creating a custom component for event details	399
Showing details of the selected event	406
Updating the selected event	407
Updating in Flex	407
Updating in ASP.NET	411
Testing the update	413
Adding a new event	415
Deleting an event	416
Deleting in Flex	416
Deleting in ASP.NET	418
Summary	419
Chapter 14 PHP Case Study	421
Understanding the application	422
The application interface	422
The application data source	426
Viewing the XML content	426
Structuring the application	428
Creating the application	429
Creating the Flex application interface	430
Creating the PHP pages to generate the XML content	433
Creating the custom ActionScript class to load the content	436
Loading the XML content	438
Creating custom events	439
Creating the MessageEvent class	439
Creating the PostsEvent class	440
Dispatching events from the completeHandler function	441
Displaying the current posts	442
Displaying the title and date	442
Displaying the content	444
Changing the date format	444
Displaying the archive posts	445
Disabling administrator functions	448

Coding the login form	448
Creating a custom component for post details	452
Updating the selected post	454
Creating the custom class to store post values	454
Creating the editPost function	455
Handling the edit	456
Processing the updates	457
Validating the form contents	458
Responding to the returned message	461
Refreshing the data provider for the Repeater	462
Adding a new post	463
Deleting an existing post	464
Summary	466

PART 3 LIVECYCLE DATA SERVICES

Chapter 15 Introduction to LiveCycle Data Services 469

LiveCycle Data Services features	470
Installing LiveCycle Data Services ES	471
LDS with integrated JRUN	472
LDS J2EE application	472
LiveCycle Data Services ES directory structure	473
Set up a Flex application for use with LiveCycle Data Services ES	474
Using JRun	475
Using Tomcat	475
Using LiveCycle Data Services	475
Message Service	476
Building a basic chat application	476
Setting up the message destination	477
Sending messages to the server	478
Receiving messages from the server	479
RPC services	481
Exploring web and HTTP services	481
Understanding the Proxy Service	482
Consuming a web service	482
Consuming an HTTP service	486
Exploring the remote object service	489
Consuming a simple remote object service	489
Data Management Services	497
Using DMS with SQLAssembler	499
Setting up the Flex project	499
Summary	509

Chapter 16 LiveCycle Data Services Case Study	511
Understanding the case study	512
The book admin application	512
The book viewer application	513
The server-side configuration	514
Creating the book admin application	516
Showing the selected book details	517
Creating the client-side Book class	518
Populating the form with the book details	519
Showing the book cover image	520
Updating the selected book details	521
Deleting a Book object	522
Adding a Book object	523
Uploading a book cover to the server	523
Creating a FileReference object	524
Browsing the file system	524
Uploading the selected file	525
Understanding the server-side script	526
Creating the book viewer application	528
Adding an application ControlBar	528
Setting up the Flex DataService	529
Building the custom item renderer	530
Showing the books in a TileList	531
Showing the details of each book	532
Testing both applications	533
Summary	533
Index	534
